Colour Palette

Radioloq's colour palette is designed to balance clinical authority with human reassurance. Deep navy establishes trust, precision, and professional confidence, while layered blues bring clarity, accessibility, and a sense of calm. The lighter tones create space for complex information to feel easier to understand.

Midnight Navy

CMYK: 66, 39, 0, 84
HEX: #0E1929
RGB: 14, 25, 41

Diagnostic Blue

CMYK: 68, 50, 0, 0

RGB: 81, 128, 255

Spectrum Blue

CMYK: 36, 23, 0, 0
HEX: #A3C3FE
RGB: 163, 195, 254

Luminescent Ice

CMYK: 17, 11, 0, 0
HEX: #D3E2FF
RGB: 211, 226, 255

Clinical Mist

CMYK: 4, 2, 0, 0
HEX: #DFE2E2
RGB: 243, 248, 254

Colour Usage Principles

- Midnight Navy should lead the visual hierarchy.
- Diagnostic Blue should guide attention, not dominate every layout.
- Use Spectrum Blue and Luminescent Ice to create softness, depth, and readable information layers.
- Clinical Mist should be the default light canvas instead of pure white whenever possible.
- Use white as a supporting neutral for clarity and contrast.
- Avoid introducing unrelated bright colours
- Radioloq should always feel focused, composed, and clinically credible.

Suggested Proportion

45% Clinical Mist / white space | 30% Midnight Navy | 15% Luminescent Ice | 7% | 3%
